

ReportBridge is a reporting alignment aid. It does not certify legal compliance, statutory approval, land title, ESIA approval, carbon credit eligibility, or donor safeguard compliance. Each row must be checked by a qualified reviewer before client delivery.

Purpose

This crosswalk shows how SiteSense, BioMainstream, ConsentTrack, source-catalogue evidence, and field records can be translated into reporting themes for clients, agencies, donors, ESG teams, and project developers.

Sample Reporting Crosswalk

Theme	Evidence item	Likely source	Confidence	Reporting use	Gap / next action
Land and tenure	Submitted boundary, land status note, district/location reference	SiteSense intake and reviewed land records	Medium until verified	Supports early land due-diligence questions	Confirm title, tenure, survey plan, and customary interests
Environment and permitting	EPA relevance, wetland/water proximity, possible ESIA trigger	EPA guidance, source catalogue, spatial evidence	Medium	Flags statutory pathway and likely permitting questions	Confirm current EPA category and district-specific requirements
Biodiversity	Protected area, forest, wetland, habitat, or species sensitivity signal	BioMainstream source pack, WDPA/UNBL/GFW where relevant	Medium to high by source	Frames biodiversity mainstreaming decision lens	Promote only reviewed citations into client report
Water and wetlands	River, reservoir, Ramsar, wetland, watershed, drainage, or flood signal	SiteSense GIS evidence and public water/wetland layers	Medium	Supports water-risk, abstraction, and adaptation narrative	Check WRC, EPA, district, and field conditions
Agriculture and land use	Crop, farm, land-cover, access, production, or land-use change signal	WorldCover, farm records, field observations, client intake	Medium	Supports agriculture suitability and conflict-of-use discussion	Confirm seasonality, soil/water, access, and market pathway
Community and safeguards	Community governance, customary use, stakeholder concern, consent or grievance signal	ConsentTrack starter pack, public contributions, field records	Low until verified	Frames consultation readiness and social safeguard pathway	Do not treat as consent evidence until reviewed and documented
Policy and institutions	Relevant agency, law, policy, programme, strategy, or mandate	FAOLEX, government agency pages, MLNR/EPA/FC/WRC/MOFA materials	Variable	Maps who should be consulted and which frameworks apply	Check source date, legal currency, and mandate boundary
Climate and carbon	Forest/carbon, land restoration, adaptation, climate-smart agriculture, blue/green carbon signal	Green Carbon / Forest Intelligence pack and public datasets	Medium	Frames carbon-readiness and climate-finance potential	Require specialist review before claims or credit assumptions

How GAB Uses This

Stage	Use
Free resource	Help a user understand what evidence is needed before a serious report can be prepared.
SiteSense review	Convert a site-risk screen into a structured reporting map when evidence exists.
BioMainstream	Route biodiversity and ecosystem signals into decision-ready reporting themes.
ConsentTrack	Bring community-consultation readiness into the reporting pathway without storing sensitive evidence too early.
Paid service	Prepare a custom reporting crosswalk tied to client objectives, statutory questions, safeguards, donor reporting, ESG, MRV, or project finance needs.
